(54) Title: GARMENT COMPRISING ELECTRODE

(57) Abstract: The invention relates to a garment, adapted to be used as a medical electrode. The garment comprises a tubular body, which comprises at least two different zones. One of these zones is an electrically conductive zone (11), to be used as the electrode surface of the medical electrode. Another zone is an elastic zone (10), which comprises electrically non-conductive yarns. This elastic zone assures the position of the electrically conductive zone on the corpus on which the medical electrode is to be used.

Published:

- With international search report.
- (88) Date of publication of the international search report: 3 May 2001

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

A. CLASSIFICATION OF SUBJECT MATTER IPC 7 A61N1/04

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols) A61N IPC 7

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data
